

Jared Branscum

727-534-1132 | jaredr.branscum@gmail.com | linkedin.com/in/jaredbranscum | Duluth, GA 30097

PROFESSIONAL PROFILE

Product-focused Full Stack Software Engineer with over 3 years of professional experience building scalable multi-service architectures, distributed platforms, and responsive client interfaces. Technically proficient across Go, Python, and Java backend REST APIs alongside production Next.js and React user applications. Proven track record executing greenfield product feature deployments, optimizing complex data APIs, and leading the resolution of critical full-stack infrastructure and architectural incidents.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, JavaScript, Java, C++, SQL

Frameworks & Libraries: Next.js, React, FastAPI, TanStack Query, Spring Boot, Angular, Node.js

Cloud & Infrastructure: AWS (S3, EC2, Lambda, SNS, SQS), Docker, Kubernetes, LocalStack, Keycloak

CI/CD & Version Control: Git, GitHub, GitLab CI/CD, Jenkins Pipelines, Terraform, Argo CD, Helm

Testing Frameworks: Playwright, Cypress, Jest, JUnit, Karma, Test Driven Development (TDD)

Data & Messaging: PostgreSQL, MySQL, NoSQL, Redis, Kafka

Systems & AI Extensions: Linux, Shell Scripting, AI-assisted development (Cline, Cursor, Google Antigravity)

WORK EXPERIENCE

Private Investor

01/2025 – Present

Self-Employed

Duluth, GA

- Design, develop, and maintain custom data projects and market analysis modules using Python and data management frameworks.
- Leverage AI coding assistants (Cline, Cursor) and Google Antigravity to accelerate full-stack development, optimize processing workflows, and build data features.
- Systematically execute data-driven strategies based on market volatility, maintaining software correctness and strictly optimized code scripts.

Greptile

04/2025 – 04/2025

Software Engineer (Contracted Project)

San Francisco, CA

- Collaborated with multidisciplinary engineering teams to design and execute a strategy to reduce customer onboarding friction for an AI-driven codebase review application.
- Developed bash installer scripts to automate customer platform setups within secure cloud-native AWS environments.

Veracode

05/2022 – 10/2024

Software Engineer

Atlanta, GA

- Engineered the backend task scheduling architectures and core customer user journey workflows for initiating and terminating dynamic asynchronous platform processes.
- Designed and implemented high-performance, API-first paginated Spring Boot REST endpoints to optimize the retrieval, sorting, and delivery of large-scale platform data arrays.
- Developed production-ready Infrastructure as Code (IaC) utilizing Terraform for a greenfield service deployment consisting of microservice backends and a frontend React single-page application (SPA).
- Built reusable UI modules using React and Angular, utilizing TanStack Query for client-side state management, server-state caching, and synchronization across data-heavy views.
- Resolved a critical production backend service downtime incident and cross-functionally investigated, triaged, and fixed blocked architectural defects residing in codebases managed by external engineering teams.
- Practiced Test-Driven Development (TDD) and pair programming, writing comprehensive automated test suites via Jest, Playwright, JUnit, and Cypress to guarantee system performance and data validation boundaries.
- Executed technical system modernization tasks, including analyzing dependencies and migrating a legacy runtime application environment from Java 8 to Java 17.

NCR Corporation

07/2021 – 05/2022

Engineer I

Atlanta, GA

- Engineered a high-performance, real-time remote assistance feature for a national network infrastructure, delivering immediate live data synchronization and interaction handling.

- Designed and developed a client-facing TypeScript software development kit (SDK) focused on clean, predictable, and secure application programming interfaces (APIs).
- Utilized Git version control and established Jenkins continuous integration pipelines to support reliable software configuration and deployment setups.

PROJECTS

- Smart Vault** | *Next.js 15, FastAPI, PostgreSQL, AWS S3, Docker, Python* github.com/jaredr-branscum/smart-vault
- Built a cloud-native document management platform featuring an interactive data dashboard, schema controls, and secure file workflows using S3-backed time-limited pre-signed URLs.
 - Designed a zero-knowledge processing and redaction engine that detects and masks sensitive client database fields entirely on the frontend prior to API transit.
 - Configured container runtimes using non-root execution profiles, isolated network topologies, and integrated local mocking instances for S3 (LocalStack) and identity management (Keycloak).
 - Applied Test-Driven Development (TDD) to design comprehensive test suites validating security-hardening mechanisms, data schema bounds, and client data flows.

EDUCATION

- | | |
|--|-------------------------------------|
| Georgia Institute of Technology
<i>Master of Science, Computer Science</i> | Atlanta, GA
08/2019 – 05/2021 |
| Florida Atlantic University
<i>Bachelor of Science, Computer Science</i> | Boca Raton, FL
08/2018 – 08/2019 |

CERTIFICATIONS & AWARDS

- | | |
|--|---------|
| AWS Certified Developer Associate
<i>Amazon Web Services</i> | 12/2022 |
| Eagle Scout
<i>Boy Scouts of America</i> | 01/2018 |
